TECHNICAL SKILLS

Languages

PythonJavaScriptPHPSQL

C

Web & Frameworks

FastAPIAstroTailwind CSS

HTML5/CSS3

Databases

MariaDBMySQL

Tools & DevOps

DockerDocker Compose

Linux (Fedora)Git / GitHub

Ollama

LANGUAGES

Italian — Native
English — Professional working

PROFILE

Motivated 3rd-year Computer Engineering student at Sapienza University of Rome, with hands-on experience building multi-container software systems and data processing pipelines. Currently evaluating a Master's degree in Cybersecurity or Artificial Intelligence. Ranked 7th out of ~60 groups in an intensive NLP lab project, qualifying for a selective personalized thesis track. Driven by a problem-solving mindset and a focus on writing clean, well-structured code.

EDUCATION

B.Sc. in Computer Engineering
[Sapienza Università di Roma](#) | 2023 — Present

Focus areas: software systems, computer networks, web architectures, security fundamentals, and data processing.

PROJECTS & RESEARCH

Web Parsing & Evaluation System for Minerva LLM

Backend Developer | Academic Project — Prof. Navigli, Sapienza | 2025

- Built a multi-container system for web document parsing and automated quality evaluation, contributing to the Minerva LLM ecosystem developed by Sapienza NLP and Babelscape.
- Implemented customized async web scrapers via Crawl4AI with domain-specific configurations, and stored structured data in a MariaDB relational database.
- Developed an evaluation module computing precision, recall, and F1-score against a manually constructed Gold Standard dataset, plus an automated LLM-as-a-Judge workflow via Ollama.
- Exposed the full pipeline through FastAPI REST endpoints and a Jinja2-based Web UI, orchestrated with Docker Compose.
- Ranked 7th out of ~60 groups, qualifying for a selective personalized NLP thesis track with Prof. Navigli.

B.Sc. Thesis: Context-Aware Web Chatbot

B.Sc. Thesis Student | Advisor: Prof. Roberto Navigli | Ongoing

- Developing a knowledge-grounded chatbot that queries live web sources, cleans retrieved pages through the Minerva parser pipeline, and injects structured context into an LLM for real-time, source-backed responses.

Full-Stack Nightclub Management System

Full-Stack & Database Developer | Team of 3 — Sapienza | 2025

- Co-developed a web application for a nightclub implementing table booking, administrative dashboards, and user authentication.
- Built the back-end logic and database operations in PHP/SQL, and developed a responsive front-end layout with HTML, CSS, and JavaScript.
